SwiftLog Logistics Analytics & AI Transformation

Executive presentation: findings, KPIs and recommendations

OTUTU LINDA CHINECHEREM Power BI, DAX and data storytelling

What we will cover

1. Business overview
2. Project objectives
3. Data preparation
4. Dashboard demonstration
5. KPI summary
6. Key insights
7. Recommendations
8. Expected business impact
9. Conclusion

Strong demand, weak execution

Who SwiftLog serves

Products ship from 15 warehouses in Lagos, Abuja and Kano to customers in Lagos, Abuja, Kano and Ibadan.

What is going well

Revenue is broad-based and 96% of customers have ordered more than once.

What is not

Late deliveries, cancelled orders and a large backlog of pending orders.

5,000
orders from 1 Jan to 8 Sep 2026

21.67M
total revenue

1,000
customers in 4 cities

15
warehouses and 200 staff

Scope: 11 operational datasets, analysed in Power BI.

Five objectives, one integrated solution

	Objective	What we delivered
1	**Integrate the data**	One model linking 11 operational datasets
2	**Clean and prepare**	Quality checks, duplicate removal and new analysis fields
3	**Develop KPIs**	24 DAX measures covering sales, delivery, inventory and returns
4	**Build the dashboard**	Five interactive pages with drill-through, tooltips and slicers
5	**Drive decisions**	Ten analysis answers and twelve evidence-based recommendations

From raw files to a reliable model

1

Import

11 CSV files loaded into Power BI: 5,000 orders and 15,000 order lines

2

Inspect

Checked every column: 0 missing values, 3 duplicate rows found

3

Transform

Fixed data types; added date, conditional and calculated columns

4

Model

Linked the tables in a star schema with one-to-many relationships

5

Measure

Wrote 24 DAX measures for the KPIs

So what: Only Inventory had duplicates (3 rows). The work focused on structure, so every KPI is traceable and consistent.

A star-schema model links all 11 tables

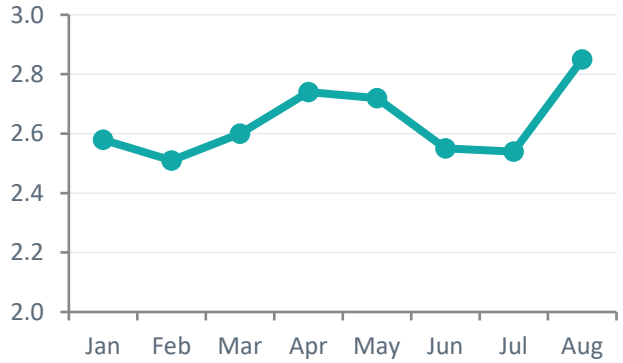

Dimensions describe the business. Fact tables record what happens. Each line is a one-to-many link.

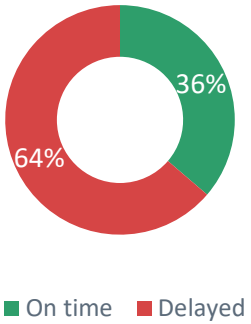

Dashboard demonstration: the Executive page

21.67M	5,000	1,000	4,548	36.3%	9.5%
Revenue	Orders	Customers	Avg order	On time	Return rate

Revenue by month (millions)

Delivery performance

Built to explore

- 5 report pages
- Slicers on every page
- Click to cross-filter
- Drill-through to customer and product detail
- Hover tooltips
- What-If sliders
- Mobile layout

So what: One page gives leaders the headline numbers, trends and risks, and every visual can be filtered.

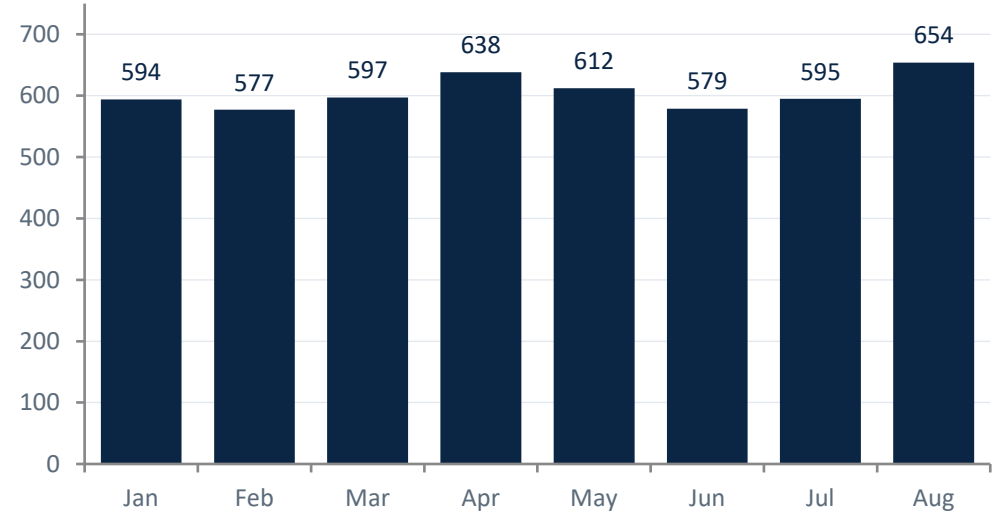

KPI summary: strengths and red flags

21.67M Total revenue Strong	**96.0%** Repeat customers Strong	**4,548** Average order value Healthy	**9.5%** Return rate Watch
36.3% On-time delivery Critical	**3.57 days** Average delivery delay Critical	**32.5%** Cancellation rate Critical	**0.08** Inventory turnover Critical

Strong: green Watch: amber Critical: red

Demand is healthy and well spread

Orders per month (September is partial)

Peaks in April and August
638 and 654 orders against a 577 to 612 norm

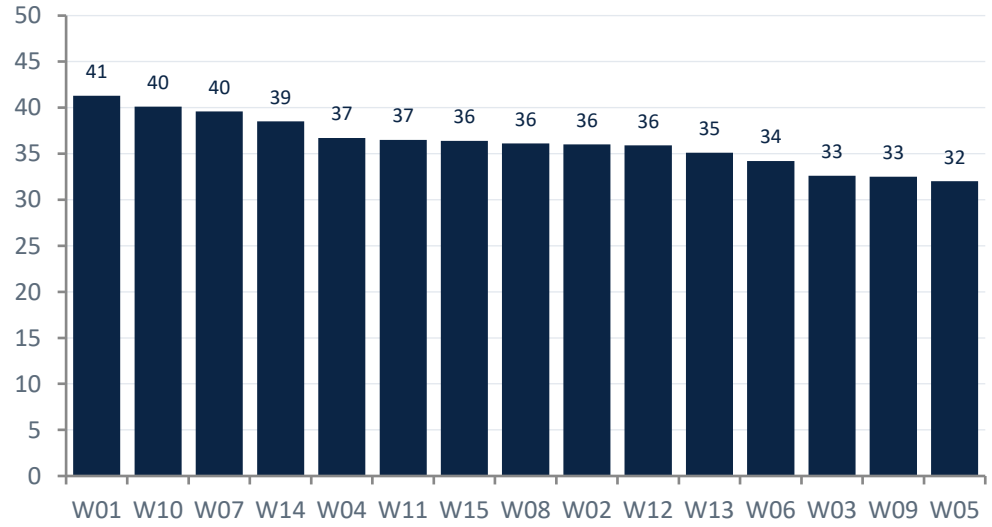

3.0% from the top 10 customers
No customer dependency; top 10 products give 8.1%

63.3% from premium products
Items priced at 300 or more drive most revenue

So what: Demand is healthy and diversified, so the priority is service quality, not generating more demand.

Only 36% of deliveries arrive on time

On-time delivery rate by warehouse (%)

63.7% of shipments are late
1,297 shipments arrive 6 to 7 days late

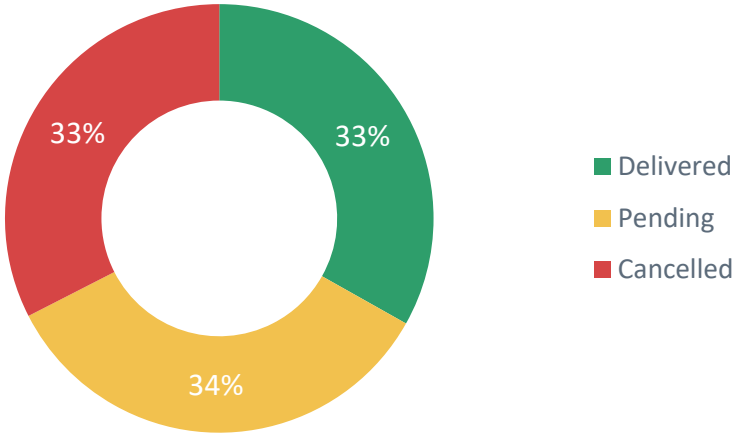

Best W01, weakest W05
41.3% against 32.0% on time

Kano customers hit hardest
65.7% of their deliveries are delayed

So what: Every warehouse is below 42% on time, so the problem is systemic, not one site.

Only one in three orders is delivered

Orders by status (5,000 total)

7.23M cancelled
1,626 orders (32.5%) never completed

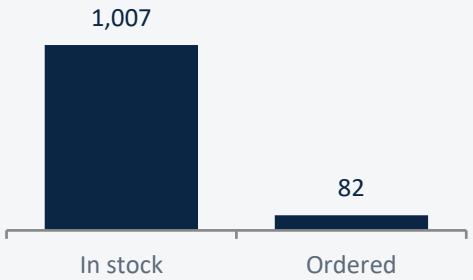

1,716 orders still pending
Worth 7.33 million in revenue

1,270 pending over 60 days old
Worth about 5.54 million

So what: The quickest revenue opportunity is clearing the stale pending orders and cutting cancellations.

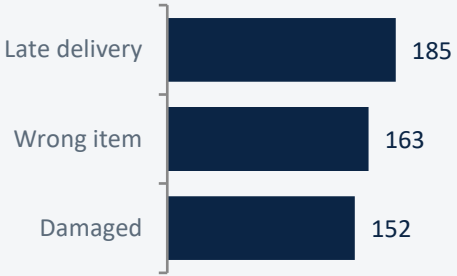

Stock is high but badly placed

Inventory

12x more stock than units ordered, yet 746 records (18.7%) are below 100 units

Returns

9.5% return rate. Every reason is operational and preventable

Suppliers

51.6 to 67.3

score range. Only Supplier 85 and Supplier 116 stay in the top 20 in both halves of the period

Based on a simulated supplier link

So what: Stock sits in the wrong places, and returns trace back to delivery, picking and packaging.

Six priority actions

1 Fix delivery

Run a 90-day on-time recovery plan with daily exception reports

Evidence: On time: 36.3%

2 Clear the backlog

Confirm or cancel any order older than 30 days

Evidence: 1,270 stale orders

3 Cut cancellations

Find root causes and add order validation

Evidence: 32.5% cancelled

4 Balance warehouses

Share W01 practices and rebalance staff

Evidence: 19.9 vs 37.8 per head

5 Right-size stock

Set reorder points and move stock to low-stock sites

Evidence: Turnover: 0.08

6 Reduce returns

Add pick-and-pack checks and better packaging

Evidence: 9.5% return rate

Six more cover supplier scorecards, loyalty programmes, premium range growth, peak planning, data quality and weekly KPI reviews.

What improvement could deliver

Area	Today	Proposed target	Illustrative impact
On-time delivery	36.3%	55%	About 935 more on-time shipments
Cancellations	32.5%	25%	About 375 more orders, roughly 1.7M
Old pending orders	1,270 orders	20% recovered	About 1.1M in revenue
Return rate	9.5%	7.5%	About 100 fewer returned orders
Stock held	1.0M units	20% lower	About 200,000 fewer units held

So what: Illustrative scenarios on current volumes (5,000 orders). Targets are proposals to confirm with management.

Conclusion

1. **Strong foundation** — Demand is broad and 96% of customers come back.
2. **Execution gap** — Late delivery, cancellations and the backlog hold revenue back.
3. **Clear path** — The dashboard tracks every KPI, so progress can be reviewed weekly.
