WEEK 5 PROJECT REPORT

SWIFTLOG LOGISTICS ANALYSIS & AI TRANSFORMATION PROJECT

TITLE: Enterprise supply chain Analytics and Artificial intelligence Transformation for SwiftLog Logistics Limited.

TOOLS: Microsoft Power BI Desktop (Power Query and Dax)

INTERN: OTUTU LINDA CHINECHEREM

SwiftLog Logistics Analytics & AI Transformation Project

Part 6: Business Recommendations

Context

These recommendations are based on the findings of the SwiftLog Power BI dashboard (Executive, Customers, Inventory & Warehouse, Shipments & Delivery, and Suppliers & Products pages) and on the analysis in Part 5. Orders run from 1 January to 8 September 2026. Supplier findings use a simulated product-to-supplier link, and the delivery lead time (3 days), warehouse capacity (100,000 units) and on-time definition (2 days or less) are assumptions.

Key findings behind the recommendations

Finding	Dashboard evidence
Delivery reliability is poor	On-time rate 36.3%; average delay 3.57 days; 1,297 shipments delayed 6 to 7 days
Orders do not complete	32.5% cancelled (7.23 million); 1,716 pending (7.33 million); 1,270 pending over 60 days (5.54 million)
Inventory is large but badly placed	Turnover 0.08; 1,006,935 units in stock vs 82,442 ordered; 746 low-stock records (18.7%)
Warehouse performance and workload are uneven	On-time rate from 32.0% (W05) to 41.3% (W01); 19.9 to 37.8 shipments per employee
Returns have operational causes	Return rate 9.5%; late delivery 37%, wrong item 32.6%, damaged 30.4%
Customers are loyal and revenue is broad-based	Repeat rate 96.0%; top 10 customers 3.0% of revenue; premium products 63.3% of revenue

Business Recommendations

The twelve recommendations below each cite the dashboard finding behind them. Targets are proposed and should be confirmed with management.

No.	Area	Recommendation	Dashboard finding	Target (proposed)
1	Delivery optimization	Run a 90-day on-time recovery plan: a daily delay exception report, fixed dispatch cut-off times and carrier escalation for shipments that pass 2 days late. Start with the 6 to 7 day delays.	On-time rate 36.3%; 1,297 shipments delayed 6 to 7 days	On-time rate 55% or higher; average delay 2.5 days or less
2	Logistics optimization	Review carrier and route performance for Kano deliveries and for Lagos-based dispatch, and rebalance shipment allocation toward better-performing warehouses with spare capacity.	Kano 65.7% delayed; Lagos warehouses ship 52.9% of volume with a 64.3% delay rate	Kano delayed share 55% or lower

No.	Area	Recommendation	Dashboard finding	Target (proposed)
3	Warehouse efficiency	Document the practices at W01, W10 and W07 and roll them out to W05, W09 and W03. Move staff from W13 to W14, W15 and W12.	W01 41.3% vs W05 32.0% on time; 19.9 vs 37.8 shipments per employee	Gap between best and worst warehouse under 5 points
4	Inventory management	Set reorder points and maximum stock levels by category and review excess stock, especially in Fashion, the largest holding.	Turnover 0.08; 1,006,935 units in stock vs 82,442 ordered	Cut excess stock by 20%; raise turnover
5	Inventory management	Redistribute stock to sites with low-stock records and switch on low-stock alerts using the dashboard threshold.	746 low-stock records (18.7%); 9 at zero; highest at W03, W15, W14	Low-stock records under 10%
6	Supplier improvement	Introduce supplier scorecards and quarterly reviews, with on-time and cancellation targets in contracts. Recognise stable suppliers and put the lowest on improvement plans.	Scores 51.6 to 67.3; only Supplier 85 and 116 stay in the top 20 in both periods	Lift the bottom ten suppliers to the average score (59.0)
7	Customer retention	Launch a loyalty programme for frequent buyers and a win-back campaign for one-time and never-ordered customers.	96.0% repeat rate; 5.05 orders per customer; 40 one-time customers, 9 never ordered	Keep repeat rate at 96% or higher; 5.5 orders per customer
8	Operational cost reduction	Find the root causes of cancellations (stock, payment, delivery time) and add order validation, so less effort is wasted on orders that never complete.	32.5% cancelled; 1,626 orders worth 7.23 million	Cancellation rate 25% or lower
9	Business growth	Clear the pending backlog with a rule to confirm or cancel orders older than 30 days, and contact customers with open orders.	1,716 pending orders worth 7.33 million; 1,270 older than 60 days	No pending order older than 30 days
10	Return reduction	Add pick-and-pack verification and stronger packaging, link returns to delivery performance, and watch the highest-return products.	Returns: late delivery 37%, wrong item 32.6%, damaged 30.4%; P032 21.3%, P017 18.9%, P108 18.3%	Return rate 7.5% or lower
11	Performance monitoring	Hold a weekly KPI review using the dashboard, with owners and red, yellow and green thresholds. Fix data issues at the source so reports stay reliable.	On-time 36.3%, cancellations 32.5%; 236 orders with no lines; 335 returns on cancelled or pending orders	Zero data-quality exceptions; KPIs reviewed weekly
12	Business growth	Expand the premium range in Fashion and Food, schedule capacity for April and August peaks, and grow Kano once delivery is fixed.	Premium products 63.3% of revenue; Fashion 37.2%; Kano 26.2%; peaks 654 and 638 orders	Net revenue growth of 5% per quarter

Implementation priority

Timeframe	Actions
Immediate (0 to 30 days)	Clear the pending backlog (9); start the daily delay report (1); investigate cancellation causes (8); begin weekly KPI review (11)
Short term (30 to 90 days)	Carrier and route review (2); warehouse practice sharing and staffing (3); reorder points and stock redistribution (4, 5); supplier scorecards (6); return controls (10)
Medium term (3 to 6 months)	Loyalty and win-back programmes (7); premium range, peak planning and Kano growth (12)

Coverage of the required areas

Required area	Recommendation numbers
Delivery optimization	1
Logistics optimization	2
Warehouse efficiency	3
Inventory management	4, 5
Supplier improvement	6
Customer retention	7
Operational cost reduction	8
Return reduction	10
Performance monitoring	11
Business growth opportunities	9, 12
